

Predecision and non-R controls bound the competition observable

a ΔU association under stricter feature controls
First column is construction sanity alignment, not independent evidence

Qwen Llama Gemma

b Mechanism-label classification under the same controls
Metric-specific values; correlation and F1 are not directly comparable

Qwen Llama Gemma

c Non-R association remains checkpoint dependent
Filled: bootstrap mean; open: recomputed point; lines: percentile 95% CI

d Non-R label separation is strong in this controlled task
This does not establish answer correctness or deployment control
