

Mechanism-aware policies modulate internal dominance under matched nulls

Internal modulation endpoint only; no answer-correctness or deployment-control conclusion

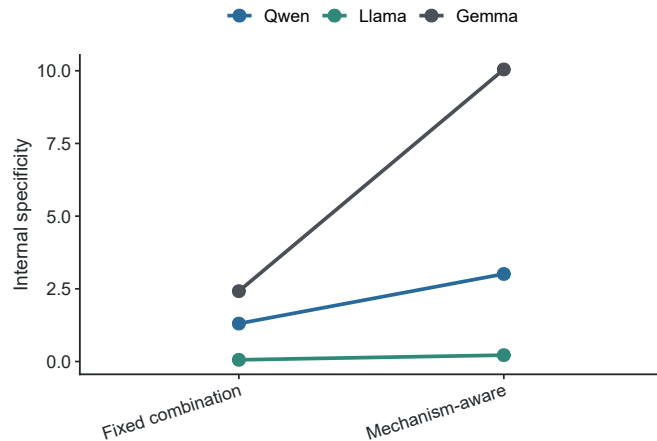

a

b

Mechanism-aware policies exceed fixed combinations

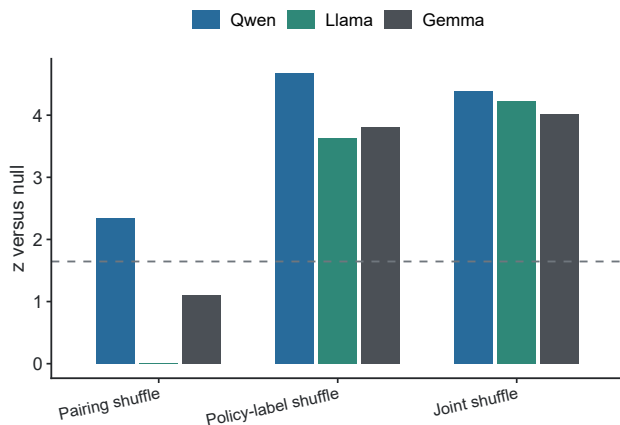

Specificity = target absolute shift - non-target absolute shift

c

Matched-null evidence is checkpoint and null-family specific

Dashed line: one-sided $z = 1.645$; 50 shuffles per family

d

Distance above the empirical 95th percentile
