

a **Order geometry recurs across task families**
real versus 50 endpoint-preserving shuffles

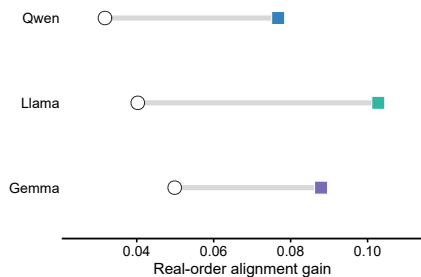

b **Four-choice structure preserves the order effect**
96 ARC-Challenge validation items; no binary wrapper

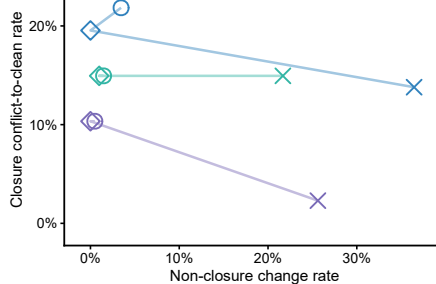

c **Predictability emerges at checkpoint-specific depths**
solid, held-out R2; dashed, order-null q95; diamond, earliest exceedance

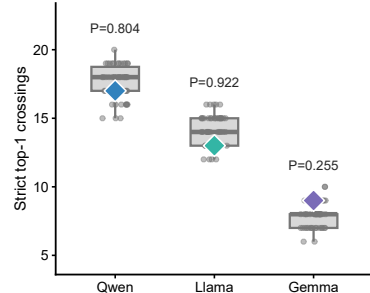

d **Random initializations preserve the order scaffold**
circle, trained; square and range, random mean and three-seed range

e **A fixed gate limits collateral output changes**
full-vocabulary top-1; lines connect controls within checkpoint

f **Matched reassignment does not resolve action specificity**
50 safety-matched reassignments; diamond, observed
